Blue Planet

Looking for Compostable Products?

At Antonelli we care about the environment. We continually review our wastage and recycling procedures in our factory and warehouse as well as our packaging materials. We are in the process of moving our cones packaging away from bubble wrap, substituting it with corrugated cardboard. Our production team is also currently trialling PLA bags instead of polythene. On top of this we also have a compostable range of tubs, spoons and take home packs, as well as compostable pouches for our dry decorations and inclusions, which all fall under our **GREENLINE** range.

Antonelli Boat - decades of composting

The Antonelli boat has been part of our product range over many decades. You could argue that this is the ultimate 'compostable' ice cream serving dish. Why? Firstly you can eat it, secondly if you don't then the birds probably will, finally if there is any left after that it will quickly biodegrade and there will be nothing left littering the streets.

Compostable Tubs - stock & personalised

If you prefer to use tubs and to help minimise your business' impact on the environment, Antonelli has introduced a range of compostable tubs. There are two ranges of compostable tubs allowing you to opt for our stock design paper tubs or our personalised paper tubs. This gives you the opportunity to still brand your tubs with your own logo without harming the environment. Each of these ranges has three sizes of compostable tubs - small, medium and large, although the individual sizes between the two ranges do vary slightly. Please note that the minimum order quantity for personalised compostable tubs is 5,000 to 10,000 depending on the size you select. PLA tubs are also available on request.

Compostable Spoons - an education

In some respects these compostable spoons are almost too successful! These spoons are made from PLA, but some consumers mistake them for plastic! So it is up to us all to **educate consumers** and broadcast to them when we are using compostable spoons. We suggest you put up a sign or add a note on your menu, put leaflets on your tables, **post on your social media platforms** and so on to explain that whilst your spoons may look like plastic they are in fact made from PLA which is compostable.

Whilst these PLA spoons are robust and help with your conscience regarding disposable products and the environment, they are susceptible to warping if left in the sun or next to an oven etc. So please **store your compostable spoons carefully**.

To discuss which compostable products you would like to be added to your next order speak to your Business Relationship Manager or [contact us...](mailto:orders@antonelli.co.uk)
